— Actualize the Enterprise Cloud™

INTRODUCING VIRTUSTREAM

Virtustream is a full cloud spectrum provider delivering enterprise class services that leverage the power and flexibility of the cloud. Our secure high-performance platform, xStream, delivers highly available and elastic compute resources with true consumption-based pricing.

We lead our suite of offerings with our Cloud Advisory Services providing expertise in the areas of cloud adoption, architecture strategy, migration roadmaps and integration services. Depending on your requirements, our xStream Cloud Platform can deliver private, multi-tenant or hybrid cloud alternatives, all managed within a single pane of glass. We then maximize your business's productivity with Cloud Cover, a set of managed services tuned to optimize the way your applications run in a cloud. Since we recognize that "one size does not fit all", we also provide Cloud Staging & Network Services geared towards colocating physical assets running workloads deemed unsuitable for the cloud yet needing to interact heavily with applications that are running in it. This allows your organization to adopt at its own pace while ensuring integrity, security and performance throughout the transformation.

Virtustream owns and operates its own data centers in the U.S. and U.K., and has offices in Washington, D.C., New York, San Francisco, Atlanta, London, Dublin and the Channel Islands.

CLOUD ADVISORY SERVICES

Virtualization represents a revolutionary shift in how infrastructure and computing power are delivered. But it involves much more than just the replacement of physical IT assets with a virtual environment. Virtualization can actually transform business processes; including improved security, increased flexibility, cost savings and environmental efficiencies. By addressing an organization's information needs and systems from a holistic perspective, virtualization ushers in a fundamental - and transformational - change in the way mission-critical information systems are delivered.

Virtualization and cloud adoption strategies to help you use what you've got, build what you need and run it. **Any way you want.**

CLOUD PLATFORM SERVICES

Most enterprises require more flexibility in their physical IT resources. Business responsiveness and agility are typically hindered by fixed computing capabilities and capacity which take time and money to reconfigure in order to effectively address growing operational needs like provisioning for peak demand. On the other hand, underutilized IT assets and inflexible overhead are often the unintended consequences. Cloud Services eliminate the limitations inherent to fixed capabilities and overhead. The result: your enterprise can virtually provision IT resources to meet business requirements.

The Virtustream environment guarantees clients an unparalleled level of security and data integrity from our Onboarding Process through the entire engagement lifecycle.

Forget VM's and think Infrastructure Units. Buy the infrastructure you need, when you need it. **Makes more sense.**

- N3 connectivity
- NHS N3 certified
- Member of (ODCA)

CLOUD COVER SERVICES

Your business applications are meant to work for you. In today's increasingly complex business environment, you face rapidly changing use-case scenarios. Managers are often forced to devote time and resources to supporting the applications that should be supporting them. There's a better way: application virtualization. Leading companies understand that out-tasking information technology and business processes can be a strategic advantage, drive efficiency and gain cost savings.

From conceptual design through implementation and ongoing maintenance, Virtustream's Cloud Cover solutions and industry-leading Service Level Agreements, enable companies to expand capabilities and nimbly respond to changing business needs while controlling costs and reducing risk.

Optimized business workloads. Check.
On-demand support. Check. Business continuity plans. Check. **We've got you covered.**

CLOUD STAGING & NETWORK SERVICES

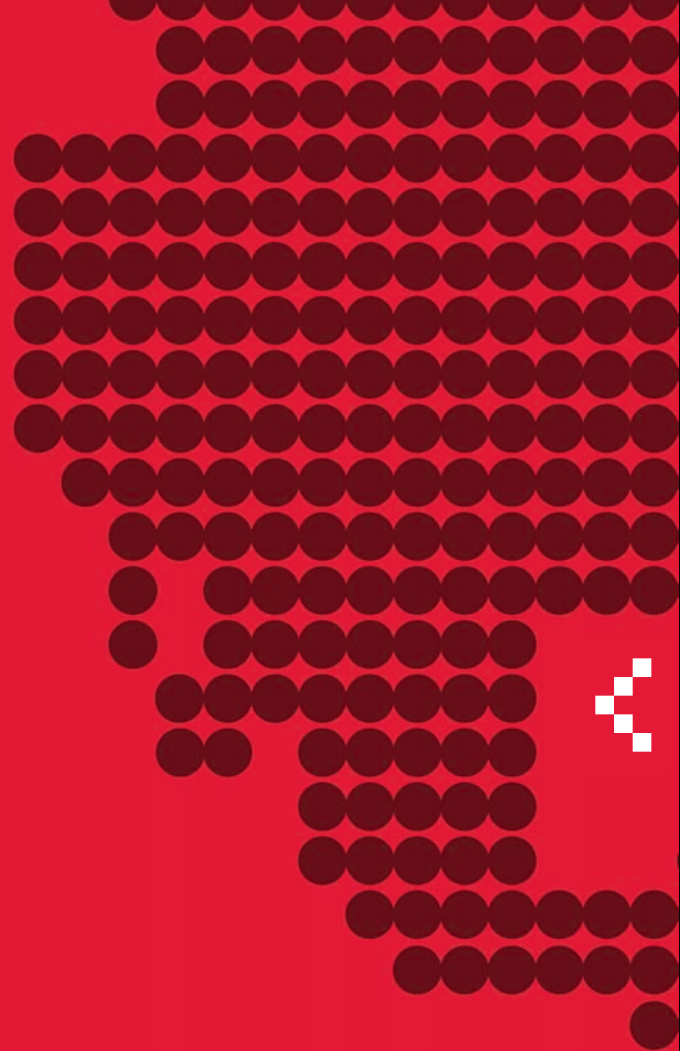

All of our data centers have been built to exacting standards to provide outstanding facilities, security, power and connectivity. The data centers house, connect, monitor and maintain mission-critical IT systems and provide the flexibility to adapt and integrate business change efficiently and effectively.

Virtustream is certified for Federal Information Security Management Act of 2002 (FISMA) standards and conforms to Statement on Standards for Attestation Engagements (SSAE) No. 16. These certifications assure Virtustream enterprise customers and prospects that the company has taken rigorous steps to ensure security, availability and business continuity for its service offerings.

You need colocation for workloads that may go to the cloud someday. We can stage them in secure data centers we own and operate. **Lets talk.**

THE VIRTUSTREAM DIFFERENCE

- Only IaaS provider capable of provisioning compute resources based on aggregate workloads, thus providing the only true consumption based offering on the market today.
- Only cloud infrastructure service to guarantee IO throughput, enabling enterprise performance suitable for mission critical workloads.
- The 7th SAP Certified Cloud Provider and currently running the largest SAP production environment ever deployed into a multi-tenanted cloud environment.
- Only IaaS provider offering a single point of management between hosted and on-premise cloud infrastructure with a single performance SLA.
- xStream is the only IaaS platform architected to be hypervisor-independent, optimizing workload performance pairing and reducing vendor dependency.

Virtustream is an innovative cloud provisioning firm committed to delivering next generation infrastructure services to enterprise class customers. We leverage our secure high performance platform, xStream, to deliver highly available and elastic compute resources at true consumption-based pricing.

Virtustream owns and operates its own data centers in the U.S. and U.K., and has offices in Washington, D.C., New York, San Francisco, Atlanta, London, Dublin and the Channel Islands.
