Risk management and continuous compliance monitoring

The world of enterprise information security, risk management, and regulatory compliance continues to grow more complex, virtualized, and distributed. Organizations must continuously monitor an increasingly diverse and complex landscape of systems to address information and network security, operational risk, and regulatory compliance in order to meet auditing and compliance requirements, and proactively protect their systems and customers from ever-increasing and evolving cyber threats.

Virtustream Viewtrust Risk Management and Continuous Compliance Monitoring solution provides organizations a near real-time view of their compliance posture, showing when critical configuration standard guideline parameters have fallen outside predefined threshold values.

Viewtrust provides a holistic view of infrastructure risks, which enables organizations to remediate in a proactive, efficient, repeatable and consistent manner across the entire business regardless of location.

Virtustream Viewtrust's key features

- Proactive risk management using a standards-based framework
- Continuous monitoring of each asset for compliance and risk with a 360 degree view of each asset within the enterprise
- Automated risk analysis based on predefined threat and impact values
- Builds and utilizes a knowledgebase for continuous refinement of data analytics
- Mission risk identification and prioritized mitigation based on Business Impact Analysis (BIA)
- Efficient, collaborative, and consistent audit practice

Risk & Regulatory Compliance

Viewtrust is deployed in the government sector and global enterprises, and can be implemented off-premises as a cloud-based solution or on-premises – scaling from mid-size to organization-wide environments consisting of hundreds of thousands of monitored assets. It enables organizations to realize secure cloud and non-cloud system resources, augmented by continuous risk and compliance monitoring, with automated alerting when critical threshold values have been exceeded or sensitive configuration parameters have been changed.

Lifecycle Monitoring & Compliance

Viewtrust continuously monitors the IT landscape, identifies potential risks to enable proactive remediation, and delivers the reporting and associated artifacts necessary to address regulatory oversight – all while meeting compliance requirements such as FISMA, SOX, PCI 3.1-DSS, HIPAA, ISO27k, FedRAMP, and custom user-defined compliance frameworks.

Virtustream Viewtrust's holistic view of infrastructure risks
provides financial and operational benefits

Reduces the cost and complexity of managing extensive compliance regulations

Enables a proactive rather than reactive approach to enterprise and business/mission risk management

Manages enterprise and cyber risk with existing point security solution silos

Performs continuous monitoring of risk with ever increasing volume of data

Gives a singular, automated 360° operational view of enterprise risk and compliance

Virtustream Viewtrust Risk Management and Continuous Compliance Monitoring solution meets compliance requirements of organizations such as:

Automated, Scalable Risk Management

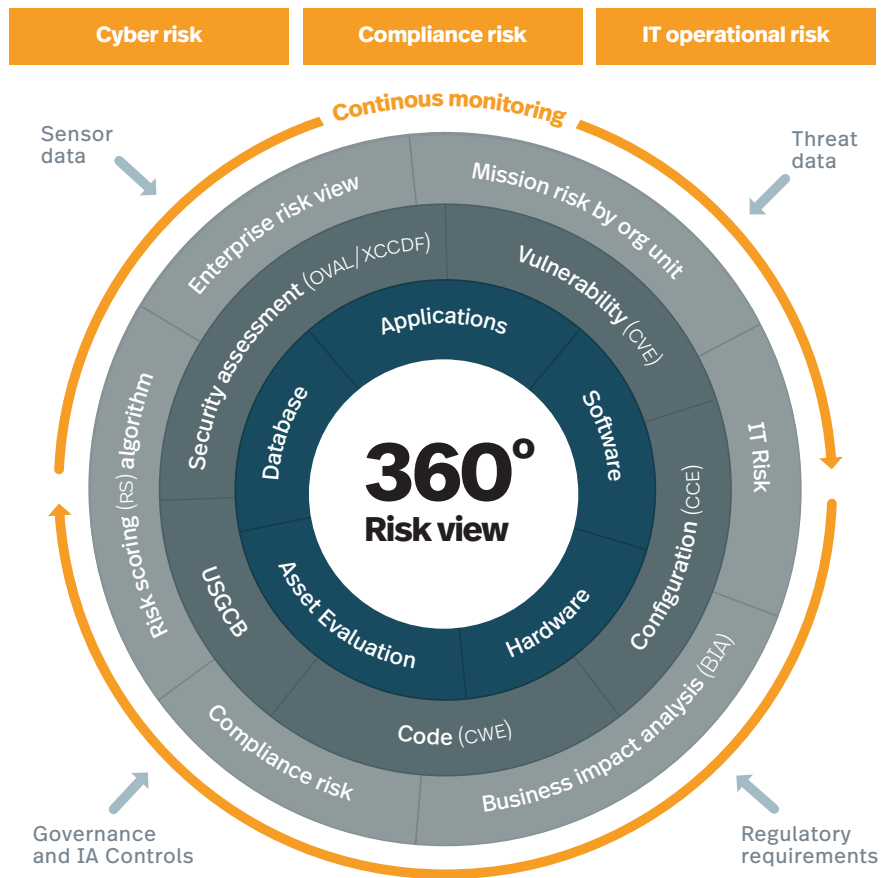

Viewtrust provides a scalable platform for ingesting, collecting, storing, and processing sensor data such as vulnerability scans, configuration scans, logs and policies for approved configuration baselines. It normalizes the information from these sensors and allows both end users and cloud service providers to create a single dashboard for meeting compliance reporting needs.

Viewtrust implements risk-scoring algorithms to compute risk based on asset, system, geo-location and mission criticality, ensuring that regulatory compliance control requirements are met by automating workflows for risk mitigation.

360 Degrees of Visibility

Viewtrust’s enterprise security and compliance software automates compliance and reduces the overall cost of managing risk. The solution orchestrates a true 360-degree enterprise risk view by integrating reporting data from virtually any collection of existing systems, empowering enterprises with comprehensive insight into their risk and compliance posture across physical and cloud environments whether private, public, hybrid, or community clouds.
