# SAP System Copy Services

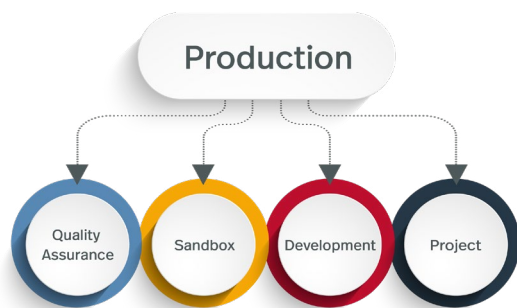

Streamlined, Flexible System Copy

Complex SAP environments often present unique technology and resource challenges for large enterprises, resulting in a growing need to simplify processes and reduce manual efforts.

SAP System Copy Services help enterprises take a step towards simplification by delivering a streamlined, flexible system copy process, allowing organizations to either pre-schedule or request on-demand copies of their environments to meet critical business requirements.

SAP System Copy Services provide a simple process for organizations looking to perform system copies and client refreshes. Delivered as a homogeneous copy (bit for bit replica of the source system), SAP System Copy Services don't require data slicing which can often be time consuming and more expensive.

### Addressing Common Use Cases

Virtustream's SAP System Copy Services provide capabilities for several core enterprise use cases, including:

- **Test/Dev:** Performing development and quality assurance against precisely what is on the enterprise's existing production system, without negatively impacting what is currently live.
- **New System Setup:** Building out a net new system for production, non-production, or a disaster recovery environment by using a copy of the existing production system.

### About Virtustream

Virtustream LLC, a Dell Technologies business, is the enterprise-class cloud company that is trusted by organizations worldwide to migrate and run their mission-critical applications in the cloud. For enterprises, service providers, healthcare organizations and government agencies, Virtustream's xStreamCare Services expertise combined with the Virtustream xStream® Management Platform and Infrastructure-as-a-Service (IaaS) meets the security, compliance, performance, efficiency and consumption-based billing requirements of complex production applications in the cloud – whether private, public or hybrid.

### Core Benefits

#### Simple

As part of this service, Virtustream implements a simplified, four step process to deliver homogeneous system copies and client refreshes, resulting in fast, efficient, and predictable copying.

1. SAP checks
2. Pre-processing
3. System copy
4. Post-processing

Automation of the pre and post processing steps expedites copy completion, and enterprises have the option to implement this service on multiple systems at the same time depending on their unique needs. This includes support for all SAP applications such as ECC, CRM, SRM, BW, GRC, and more.

#### Flexible

Organizations can either pre-schedule (one-time or recurring) or request on-demand copies, including on weekends during less production heavy hours. Consumption-based pricing allows enterprises to manage their budgets efficiently.

#### End-to-end

Virtustream's SAP certified experts handle necessary software installation, environment setup, and system copies (post-setup) as requested, allowing IT staff to continue focusing on innovation. This includes one-time setup of the environment for ongoing delivery of system copies.
