

Data Sheet

xStream[®] One

Immediate access to up-to-date, priority
information for business users

Organizations working with mission-critical applications and data in today's multicloud world require a high-level display of their environment's key data points which can be easily understood to make informed decisions. Virtustream's business portal, xStreamOne, simplifies reporting for enterprises and healthcare organizations leveraging Virtustream's services by providing immediate access to up-to-date, priority system and services information.

xStreamOne enables organizations utilizing Virtustream's services to tie together all their information in a single, easy-to-access location, along with the ability to drill down where needed. Designed to deliver a high-level view of service levels, xStreamOne transforms complex cloud and services data into a simple, streamlined format that allows business users of all levels to make informed decisions based on relevant, up-to-date information.

Key Benefits

- **Enhanced Visibility:** Near-real-time access to the most relevant, up-to-date information about your Virtustream delivered services, giving you full transparency into the day-to-day and historical operations of your environment
- **Informed Decision Making:** Thoughtfully designed dashboards enable you to easily identify recurring

patterns and correlate historical and current state information to make data based decisions.

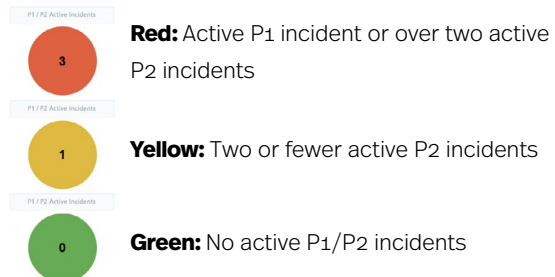

- **Simplified Reporting:** Designed to meet the needs of everyday users, xStreamOne's simplified reporting reduces the overhead of producing commonly required reports. For reporting purposes, users can sort by type, priority and resolver group in graphic, metric and list formats.

Consumption Insights

xStreamOne provides users direct access to up-to-date consumption information, with flexible display and reporting options. This includes near-real-time visibility into your top 10 VMs based on both compute and storage consumption, giving your business users a simplified understanding of which specific VMs are driving total consumption.

Change Management and Stability Insights

xStreamOne presents information on your open and closed change requests, as well as current support incidents, over the past year. As a result, your organization gains enhanced visibility into service status and open/resolved incidents, including a stoplight view of active P1/P2 issues.

End users can also access reporting for incident response SLAs and VM best practices, based on Virtustream's established policies, to better understand their achievement patterns.
